Laser Treatment
to enhance your beauty

Smartlipo is the first and only laser lipolysis system to offer a revolutionary and minimally invasive procedure for the removal of fat from the body.

Using a Nd:YAG high-powered laser, **Smartlipo** is a new clinically proven procedure for effective treatment of stubborn fatty areas (cellulite) with far less downtime and side-effects than traditional liposuction.

This leaflet is intended to provide general information on Laserlipolysis or Laserlipolisi **Smartlipo**. For further information please contact us.

Smartlipo

For a **free consultation** and more information about Smartlipo and a wide range of other cosmetic surgical and non-surgical treatments at our clinic contact us at:

Main Treatable areas with:

Smartlipo

We are approximately 3 minutes walk from Pinner Underground Station on the main London Metropolitan Line.

How does the Smartlipo procedure work?

A very small laser cannula (tube) approximately 1.0 mm to 2.0 mm in diameter is inserted into the fatty tissue area, after making the area numb. The laser energy acts on the adipose tissues and only melts down the fatty cells causing them to break down. It seems that the laser also interacts with the dermis and surrounding tissue, resulting in collagen shrinkage giving a smooth, firm and sculptured finish.

What are the benefits of Laserlipolisi (Smartlipo) over traditional liposuction?

Smartlipo is a minimally invasive procedure resulting in less bleeding, swelling and bruising and a quicker recovery time than conventional liposuction. Because general anaesthesia is unnecessary, the procedure is very safe, with only minimal side effects such as discomfort and occasional minor bruising.

How effective is the treatment with Smartlipo ?

It melts down fatty areas from the face, neck, arms, breasts (including abnormally large breasts in men), tummy, buttocks, back, chin ... and tightens loose and flabby skin (floppy skin). It is a new device with ever expanding usage. It has been used for treating many parts of the body and we are also in the process of expanding our experience with this revolutionary device for almost all parts of the body.

How much does Smartlipo cost?

It costs much less compared with traditional liposuction. We will advise you during your initial consultation.

How many treatments are needed?

Usually one and it usually takes an hour but it also depends on the size and severity of the area concerned. We will advise you accordingly.

When can I expect to see results?

The results are gradual and can be seen within weeks but usually they continue to improve over several months. The final result may take up to 4-5 months.

Does laserlipolisi (Smartlipo) give a permanent effect?

Yes, it does.

Does Smartlipo hurt?

No. It is carried out under local anaesthesia.

Who is carrying out the procedure at your Clinic?

Smartlipo, like other laser machines, is an "operator dependent" piece of equipment. Therefore, the procedure is only carried out by fully trained and highly qualified doctors in our Clinic. All our doctors are fully registered with the General Medical Council in the United Kingdom and Mr Taghipour FRCS was amongst one of the first groups of doctors to be trained in the UK.

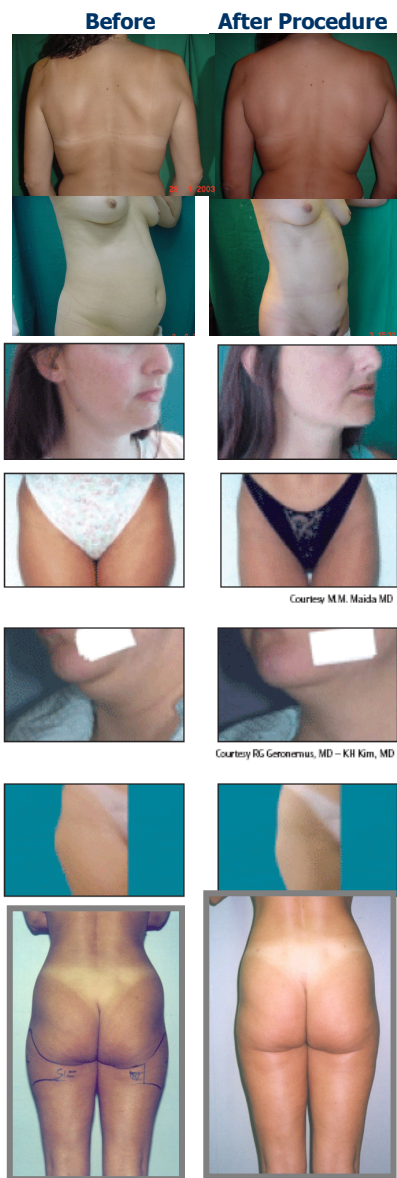

Is your Clinic registered with the Healthcare Commission?

Our Clinic is in the advanced stages of being registered with the Regulating Authority in England. It has been visited by the Healthcare Commission Inspectors and we have taken their guidelines and recommendations aboard. Our aim has been to implement the Standard of Care Guidelines 2000 in our clinic.
