

IS VASER® LIPO RIGHT FOR ME?

If you are frustrated by stubborn areas of fat deposits which are resistant to diet and exercise and seek a fast, low-pain solution then VASER Lipo is for you. Patients who say they would have never considered traditional liposuction are now finding that the VASER Lipo procedure is a gentle alternative for body shaping. Your cosmetic surgeon will assist you with your decision about potential areas for contouring, anticipated results, and the recovery process.

“My self-confidence has risen dramatically –there’s just no describing how good it feels to get rid of that one thing you really dislike about your body.”

-From a Vaser client

WHICH AREAS CAN BE TREATED WITH VASER LIPO?

Vaser Lipo can tackle the same problem areas as standard liposuction which include; abdomen, love handles, arms, back, hips, inner thighs, outer thighs, buttocks, knees, calves, female breasts, male breasts, face, chin and neck areas.

WHAT ARE THE MAIN SIDE EFFECTS OF VASER LIPO?

Vaser lipo is carried out under local anaesthesia therefore there are some minor problems. There is a dull ache and some swelling and the bandaging needs to be changed until the leakage of blood stained liquid stops. There is a risk of bruising and rarely infection might follow the operation. itching, pulling, pinching, hardness, tightness and/or a slight numbness of sensations are reported following the procedure but they should subside following the surgery.

HOW MUCH DOES VASER COST?

In the recent years, modern cosmetic surgery procedures are becoming far less invasive with improved results and faster downtime. The price of some cosmetic treatment including liposuction has also declined. Our Vaser prices starts as low as £1500 but depends on the number of areas and individual cases.

IS VASER LIPO A SAFE PROCEDURE?

Yes, Vaser is considered to be a safe procedure. Worldwide, thousands of Vaser Lipo procedures have been performed without any reported serious problems.

VASER LIPOSUCTION

For more information please visit our website:
www.cosmeticsurgery-uk.com

VASER® LIPO, GET THE BODY CONTOUR YOU WANT.

Every body type has certain areas that are predisposed to fat storage and, even with rigorous diet and exercise those unwanted bulges often persist. VASER Ultrasound Liposelection Technology now offers a less invasive and safe alternative to traditional liposuction for eliminating unwanted fat, revealing a smooth new shape with fast recovery.

VASER Lipo is regarded as the next generation of body contouring. Whether you need help with a small problem area or a major transformation, Vaser uses powerful ultrasonic energy to selectively break apart fat deposits while preserving other important tissues.

Vaser gives you more options; “I would never have considered traditional liposuction, but VASER Lipo made me finally decide to address those problem areas on my body.”
-Vaser

HOW IS VASER® LIPO DIFFERENT TO TRADITIONAL LIPOSUCTION?

Innovative VASER technology, also known as Liposelection, is an advanced body contouring which distinguishes between targeted fat from other important tissues such as; nerves, blood vessels and connective tissue; resulting in a rapid healing with smooth contour, skin retraction and tightening. Therefore, Vaser is selective and less invasive because it is only removing unwanted body fat. Vaser is an alternative and rapidly replacing the harsh technique of traditional liposuction in which a powerful vacuum pump would aggressively avulse fat and supporting tissues out. Vaser is carried out under local anaesthesia and the downtime and side effects

“I had VASER Lipo on Friday and was back to work on Monday.”

-Vaser client

HOW IS VASER COMPARED WITH SMARTLIPO/LASER LIPO?

VASER Lipo is using ultrasound technology but laser technology is being used in Smartlipo. We use both devices in our clinic and we perform them under local anaesthesia. There are other differences but generally speaking Vaser is more powerful and it is being used

WHAT HAPPENS DURING A VASER® LIPO PROCEDURE?

VASER Lipo is performed in a clean or sterile environment. After numbing the skin with local anaesthetic and making a small cut (incision) in the skin the Vaser Liposelective probe will be introduced through the cut into the fatty area to be treated and apply Vaser Liposelection ultrasonic energy to emulsify the fatty tissues, then the same piece of equipment, Vaser Liposelection, will aspirate the emulsified fat and results are noticeable as soon as the procedure is over with the prospect of further improvement in the following few

“I would definitely recommend VASER Lipo for anyone who is not able to achieve the fat reduction they want by diet and exercise alone.”

-Vaser client
